

# Wrapsody

## Enterprise Document Platform

- Share only once, and have the latest version anytime, anywhere
- Apply file-level access control and audit trail
- Backup automatically without duplication and restore them instantly
- Integrate with 3rd party systems through APIs
- Visualize document usage and gain actionable business insights
- Minimize risk from data breaches and ransomware

The evolution of collaboration in the information age is a double-edged sword, because of multiple collaboration tools. Information becomes siloed, leaving behind redundant, obsolete, and trivial (ROT) data, whose value is unknown. Facilitating secure information sharing and process flows across organizational boundaries increases productivity and creates opportunities for enhanced responsiveness and innovation. To address the need for secure data collaboration, Fasoo provides an up-to-date, intuitive enterprise collaboration solution, Wrapsody, which solves issues with information management and ROT data.

Wrapsody is a result of years of unparalleled expertise in data-centric security. It is designed to provide file-level content management, collaboration, and security for organizations without impacting productivity. With Wrapsody, we take a unique approach to information management-file-centric, rather than message-or repository-centric.

Wrapsody is an information-centric content services platform for data collaboration, management, governance and protection. Using a persistent ID, Wrapsody enables organizations to integrate a core set of functions essential to all applications that touch enterprise unstructured data.

The solution is an enterprise grade platform that manages and integrates all your documents regardless of where they are located. It is a performance enhancement solution that helps you to share documents efficiently, save resources eliminating redundancies and allows you to focus on your job. By ensuring that content management functionality travels with files wherever they go, Wrapsody fills the gaps by complementing technologies such as enterprise content management, cloud storage, enterprise messaging, and enterprise social networks – and in some cases can reduce the reliance on these alternatives. It's the next step forward for accurate, time-efficient and user-friendly information management.

Wrapsody helps organizations to build an information-centric content services platform.

**Auto Backup With Every Version**

Backup automatically without duplication and restore them instantly. Minimize risks from ransomware.

**Visualize Document Usage in Real Time**

Collect document usage logs and provide analytics on their patterns. Analyze who used the document most and determine which templates are reused.

**Extend Wrapsody Enterprise-Wide**

Integrate with 3rd party systems through APIs. Easily switch from desktop to mobile.

**No Redundant Document Sharing**

Share only once. Have the latest version anytime and anywhere.

**Protect Digital Assets at all Times**

Apply file-level access control and audit trail. Minimize risks of data breaches.

**Innovative Collaboration**

Sync the latest changes on their local document. Share comments and opinions with colleagues that are bound to documents.

**About Fasoo**

Fasoo provides unstructured data security and enterprise document platforms that enable our customers to protect, control, trace and analyze critical business information while enhancing productivity. Fasoo has successfully retained our leadership in the unstructured data security market by deploying enterprise-wide solutions for more than 1,300 organizations globally, securing more than 2.5 million users. Fasoo is experiencing continuous improvement in its global market position, based on our unique technology, ongoing R&D and strategic approach to comprehensive product capabilities by extending our core security capabilities into content-centric collaboration, behavioral analytics and information security consulting services.
